Key Takeaways

- What does Co-Management mean?
- Pre-requirements
- And most important! Why do we need it?
- Scenarios and Examples

Co-Management

Introduction

Co-Management

Properties

Enablement Workloads Staging

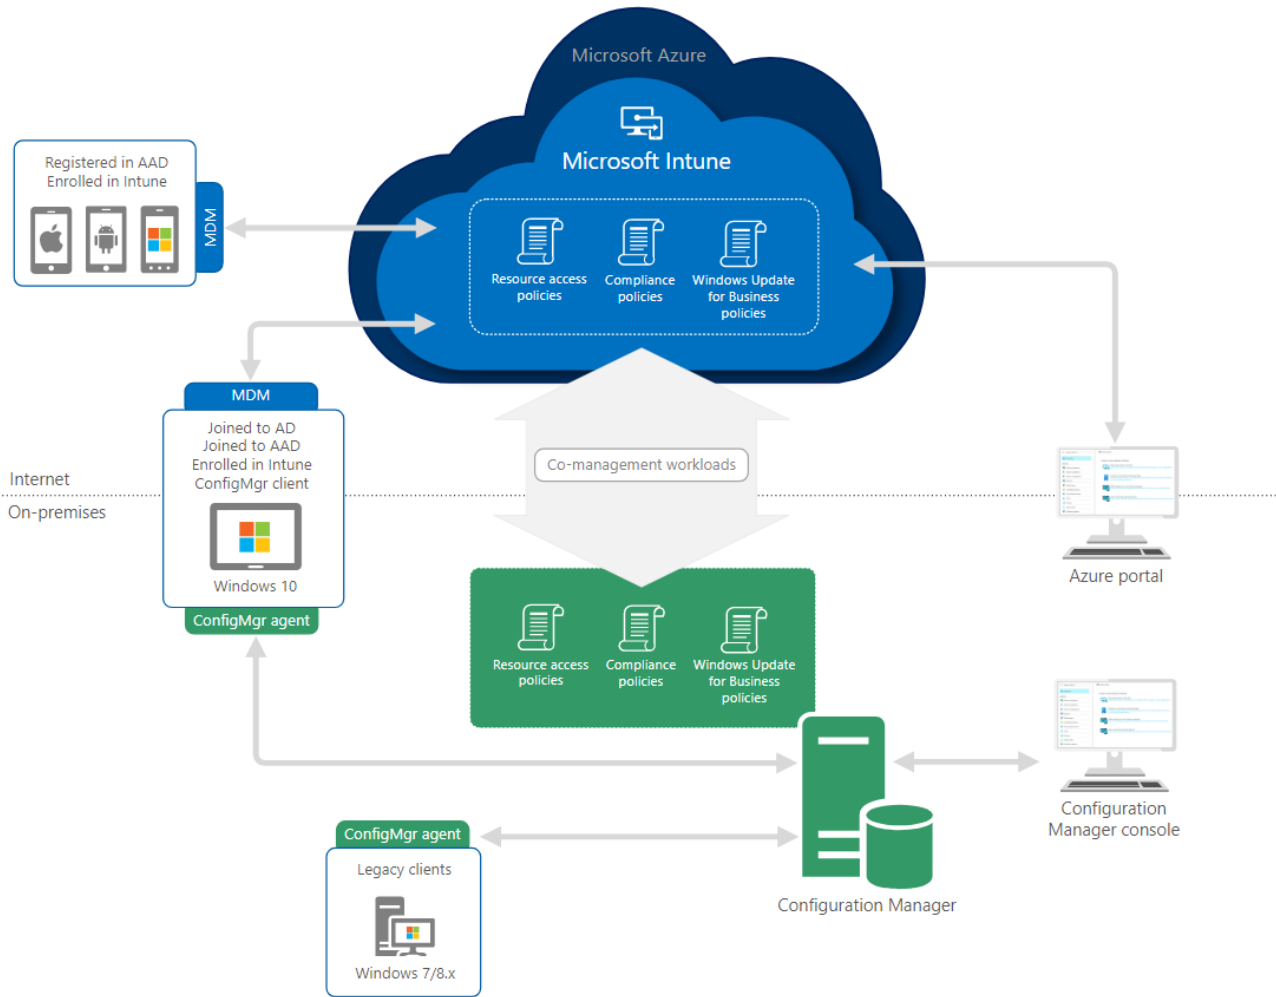

For Windows 10 devices that are in a co-management state, you can have Microsoft Intune start managing different workloads. Choose Pilot Intune to have Intune manage the workloads for only clients in the Pilot group (specified later in this wizard). If you are

Apply

Pre-requirements

Getting Started with Co-Management

- Configuration Manager version 1710 or later
- Azure AD
- EMS or Intune license for all users
- [Azure AD automatic enrollment](#) enabled
- Intune subscription (MDM authority in Intune set to **Intune**)

General Prerequisites

- Configuration Manager version 1710 or later
- Azure AD
- EMS or Intune license for all users
- Azure AD automatic enrollment enabled
- Intune subscription (MDM authority in Intune set to Intune)

Device Requirements

- Devices with the Configuration Manager client
 - Windows 10, version 1709 (also known as the Fall Creators Update) and later
 - [Hybrid Azure AD joined](#) (joined to AD and Azure AD)
- Devices without the Configuration Manager client
 - Windows 10, version 1709 (also known as the Fall Creators Update) and later
 - [Cloud Management Gateway](#) in Configuration Manager (when you use Intune to install the Configuration Manager client)

Azure AD Connector

- Must be up-to-date
- Computer Accounts must be included in the sync.

NAME	ENABLED	OS	VERSION	JOIN TYPE	OWNER	MDM	COMPLIANT
	✔ Yes	Windows 10 Enterprise	10.0 (14393)	Hybrid Azure AD joined	N/A	None	N/A
	✔ Yes	Windows 10 Enterprise	10.0 (16299)	Hybrid Azure AD joined	N/A	Microsoft Intune	N/A
	✔ Yes	Windows 10 Pro	10.0 (14393)	Hybrid Azure AD joined	N/A	None	N/A
	✔ Yes	Windows 10 Enterprise	10.0 (15063)	Hybrid Azure AD joined	N/A	None	N/A
	✔ Yes	Windows 10 Enterprise	10.0 (15063)	Hybrid Azure AD joined	N/A	None	N/A

Enable Azure AD automatic enrollment

Migrate from Intune Hybrid to Standalone

- Document and renew all certificates
 - APN, DEP etc.
- Import Configuration Manager data to Microsoft Intune
 - Applications, Policies, etc.
- Prepare Intune for user migration
 - AAD Groups, Install NDES, Exchange Connector etc.
- Change the MDM authority for specific users (mixed MDM authority)
 - Remove the user from the Intune collection in ConfigMgr
 - Userless devices can be migrated using a script
- Change your MDM authority to Intune standalone

Intune data migration tool

- Collects data about the objects you select from your Configuration Manager hierarchy.
- Provides details about the objects you can select for import and information about why some objects cannot be imported.
- Imports selected objects into your Microsoft Intune tenant.
 - Configuration items
 - Certificate profiles
 - Email profiles
 - VPN profiles
 - Wi-Fi profiles
 - Compliance policies
 - Apps
 - Deployments

Enable Co-Management

Properties

Enablement Workloads Staging

To enable co-management for devices managed by Configuration Manager, configure automatic enrollment in [Microsoft Intune](#).

Enterprise-diagnostics-
Provider

Common misunderstandings

- Co-Management requires Cloud Management Gateway and Cloud DP!
- Co-Management is only for AzureAD Joined computers
- Co-Management is to solve Intune shortcomings

Why Co-Management?!

Scenario – Azure AD Joined/Intune

- Windows Autopilot
- Make it possible to manage what Intune standalone cannot
 - Software Inventory
 - Reporting
 - Advanced App deployment
