

Shibboleth

GRAILS

= Simple federated web apps

What is GRAILS ?

Open Source

Web MVC

Runs on JVM

Builds on Spring

And much more

Apache, mod_shib, tomcat, grails

- AOP functionality through filters

```
<LocationMatch "/">
  AuthType shibboleth
  ShibrequireSession Off
  Require shibboleth
</LocationMatch>

JkMount /* ajp13_worker
```

```
JkEnvVar displayName
JkEnvVar eppn
JKEnvVar givenName
JkEnvVar mail
JkEnvVar norEduPersonNIN
JkEnvVar REMOTE_USER
JKEnvVar sp
```

```
def filters = {
  all(controller: '*', action: '*') {
    before = {
      if (!request.remoteUser) {
        try {
          session.invalidate()
        } catch (all) {}
        log.error "No request remoteUser attribute found, te
        redirect(url: 'https://login.secure.su.se/logout')
        return false
      }
      if (request.remoteUser && !session.user) {
        session.user = [
          uid: request.remoteUser?.toUId(),
          displayName: request["displayName"]
        ]
      }
    }
  }
}
```

Are there no plugins?

Grails Spring Security Shibboleth Native SP Plugin

<http://grails.org/plugin/spring-security-shibboleth-native-sp>

Federated Grails

<http://grails.org/plugin/federated-grails>

Federated Role Delegation

Using gmai's we create and delegate roles through our LDAP. Scope is grabbed from eppn.

```
public final static String BASE_URN = 'urn:mace:swami.se:gmai:su-vfu:'
```

```
// Only SU scoped people (e.g. non-students and non-questaccounts) have access to the role Sysadmin and SUPERVFUSEK.
if (request?.entitlement) {
  List<String> entitlements = (request?.entitlement as String)?.split(';')
  if (entitlements) {
    if (user?.class == User && scope == 'su.se') {
      role = (entitlements?.contains(BASE_URN + 'sysadmin')) ? Role.SYSADMIN : null
      if(!role){
        role = (entitlements?.contains(BASE_URN + 'supervfusek')) ? Role.SUPERVFUSEK : null
      }
    }
    if (!role) {
      ['vfusek':Role.VFUSEK, 'vfukontakt':Role.VFUKONTAKT].each { key, value ->
        // Will break as soon as a role is found, so use role hierarchy in the list above..
        if (!role) {
          role = (entitlements?.contains(BASE_URN + key)) ? value : null
        }
      }
    }
  }
}
```

Centralized Role And Access Delegation

Through kontoantering.su.se.

(An application written in Grails.)
